

Connecting face-to-face
through technologies

Multimedia Communications

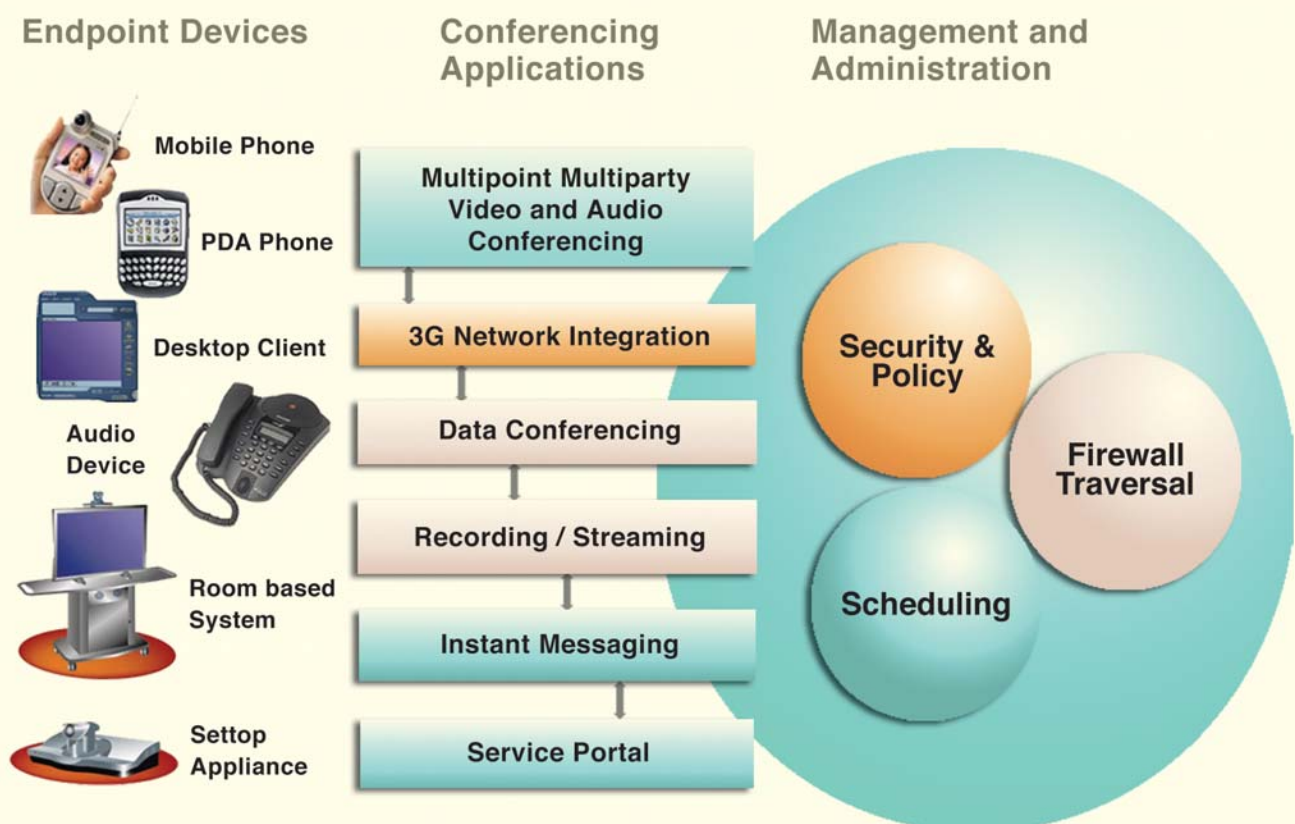

Face-to-Face Communications

An effective and reliable multimedia communications system has become an essential tool in today's business world. Companies are now seeking various communication technologies and solutions to enhance retrieval of data information, conduct face-to-face communication sessions between colleagues, business associates and customers across vast geographical boundaries.

Over the past few years, there has been an increase in video conferencing installations, for several reasons. Video conferencing increases flexibility and encourages collaboration; it accelerates the decision-making process, and allows for better intra-company communications. It also saves time and money in corporate airfare, hotel, and other traveling expenses.

These technologies were put to the test during the outbreak of the Severe Acute Respiratory Syndrome. Companies took advantage of their ISDN availability and IP connectivity technologies by implementing a "travel free" solution to their meetings.

Enterprise Multimedia Conferencing Solutions

NCS is Ready to Partner You

At NCS, we offer a wide range of multimedia engineering infrastructure and system integration solutions such as video conferencing, audio visual, digital audio and video streaming related products. We specialise in digital based audio and video solutions, network based video conferencing, integration of control systems with audio video infrastructure solutions.

We design and engineer the ultimate system to enhance and extend communication in the business environment. From simple slide presentations to sophisticated video and audio conferencing systems, NCS is ready to partner you for the most advanced and reliable integrated multi-media presentation and communication systems available.

Our Services

As a diversified system integrator, NCS provides personalised solutions for all convergence needs. This involves several distinct activities:

Consultancy

- Defining the needs of clients
- Specifying the solutions
- Identifying the sets of system requirements that must be met to produce the desired deliverables

Infrastructure Implementation

- Vendor Selection
- Project Management
- Structured Cabling and Wireless Provisions
- Development and Execution of Project Plans
- Installation, Site-Testing, System Commissioning and Training

System Framework & Design

- Each customised framework and design of NCS represents a unique blend of hardware and software applications that are customised, practical and efficient

Helpdesk & Facilities Management

- A 24x7 team of helpdesk and technical support specialists provides professional support that clients need
- Facilities management services create an outsourcing opportunity for clients to concentrate on core businesses

Our professional experts are accredited with the following certification:

Project Management Professional (PMP) – Project Management Institute

Certified Video Conferencing Engineer (CVE) – Polycom

Certified Technology Specialists (CTS, ICIA) – International Communications Industries Associations

Certified Advanced Creston Programmers – Crestron

TEF Certified Engineer (Acoustics Measurement) – By Manufacturer

Extron Certified Engineer – Extron

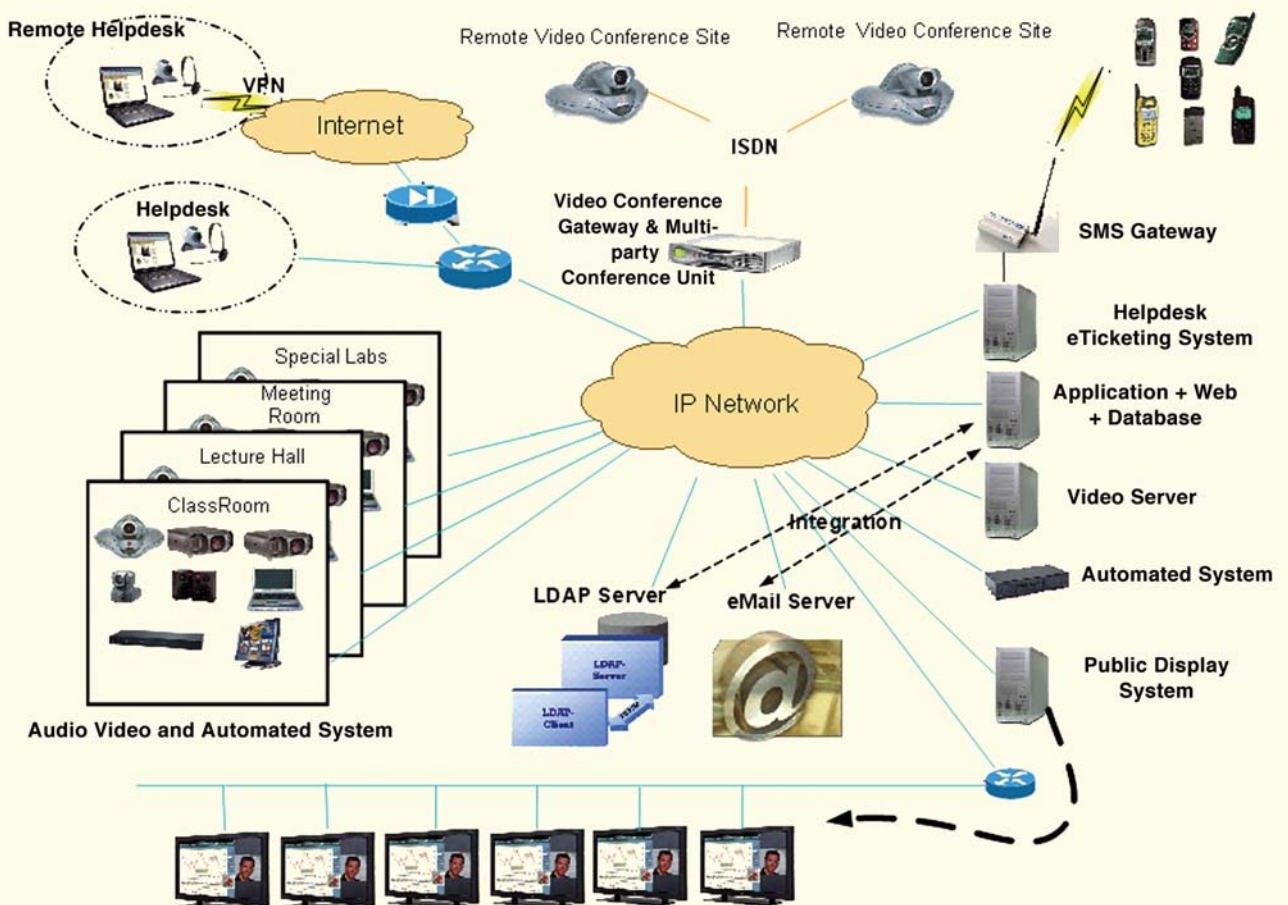

Certified Peavey Media Matrix Programmer – Peavey

Make it a Reality

At NCS, we sought to offer innovative and high end multimedia communications solutions to companies. As multimedia communications technology moves toward a digital era, the use of IT and multimedia communications converged solutions become a value-added offering from system integrators. Thus, by having the expertise of network, telecommunications and software applications under one roof, we have a full range of competency to provide value-added solution for you.

Whether it is integrating audio visual communications, enterprise audio and video conferencing solutions or the convergence of audio visual and IT, NCS has the expertise to help you turn it into reality.

Convergence Multimedia and IT Solutions

NCS Multimedia Communications

| Solutions | Offerings |
|---|--|
| Integrated Audio Visual Solutions | <ul style="list-style-type: none">■ Room based audio video presentation system featuring large screen projection, speakers and audio system for local sound reinforcement, interactive whiteboard and one touch automation control system.■ In building audio and video distribution system featuring overflow of your video and audio contents to various display devices in the building via fiber or analog to digital conversion technology.
