Communicate Your World

## OneChat

Communicate Your World

In today's modern business environment, with technology advancements, individuals are using smart phone messaging platforms for effective business communication and real-time decision-making. This is particularly evident from the popularity of mobile apps that are chat-centric.

With the need for mobility and the rising importance of mobile apps, security challenges have gone beyond technology and now encompass user behaviour.

Smart phones + Great Apps = Big Enterprise Security Challenge

Consumer chat apps are popular because of their ubiquitous use, reliability and most importantly, fun factor. The challenge for IT security is that these apps are usually cloud-based, hosted overseas, and the licensing terms seem to imply that content ownership passes to the application's host. To date, there are limited alternatives available to companies for a secured chat app that is:

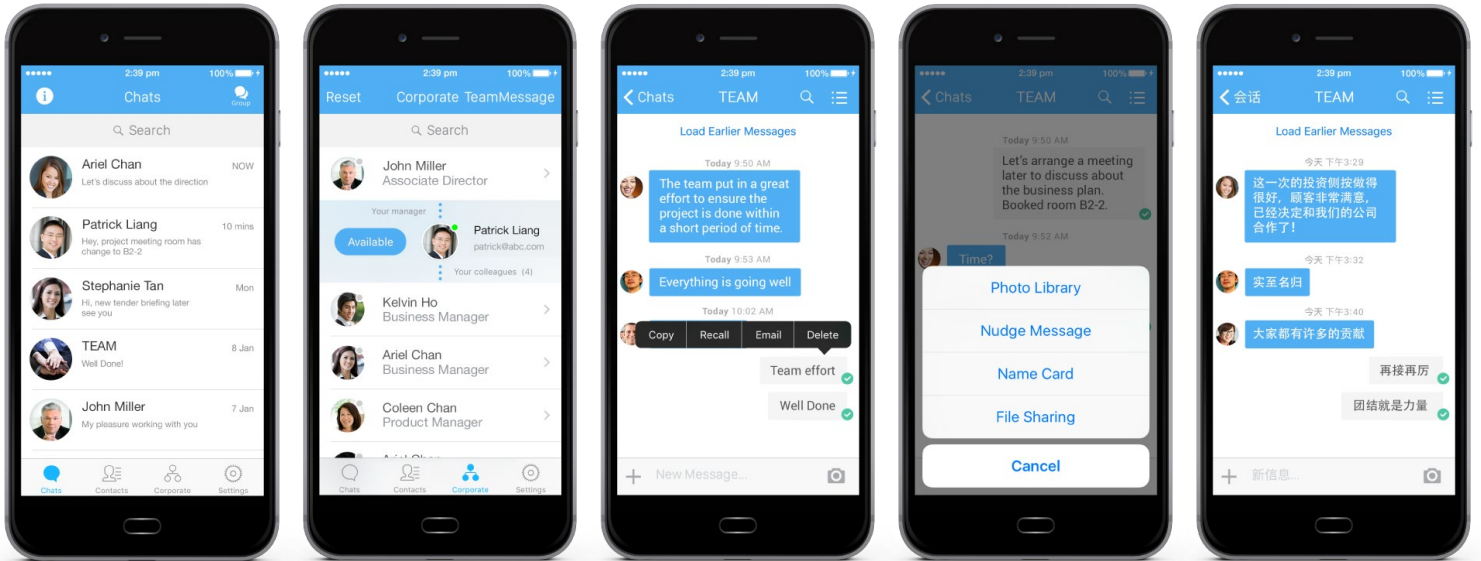

- Easy to use
- Have equivalent or better features
- Is secured (acceptable to Enterprise Security standards)

## SOLUTIONS

OneChat is specifically conceptualised for the enterprise environment. It takes into consideration the importance of security, compliance and ease of integration to the enterprise system and good technical support.

OneChat data rides within the controlled environment of the OneChat server and OneChat mobile client, with data encryption. Hence, data security is ensured. OneChat allows dedicated private cloud (VPC) or ON-PREMISE hosting depending on the enterprise's requirement.

## PRODUCT FEATURES

- Messages are securely protected using RSA AES 256 encryption
- Messages and contact details are kept on your device to ensure privacy
- Global search for “keywords” throughout all chat messages
- Ease of sharing files/documents. Support MS word, PowerPoint, Excel and PDF format
- Message delivery and read/unread status.
- User friendly group chat features
- Favourite contact list base on recent conversation for quick access
- Set reminder flag on important single group conversation track
- Restore single and group chat messages
- Undo error and recall sent messages without any hassle
- Need an urgent reply? Nudge till you get a response

- Supports integration to Active Directory.
- Supports enterprise audit requirements
- Supports both English and Chinese interfaces
- Supports animated photos

## OneChat vs Consumer Chat Apps

	OneChat	Consumer Chat Apps
Chat encryption	✓	✗
Messages and images recall	✓	✗
Messages are only stored at server & mobile app (not stored at Google or Apple push notification servers)	✓	✗
Supports Enterprise audit requirements (carbon copy stored at server)	✓	✗
Different hosting options	✓	✗
System integration (LDAP/Active Directory/Others)	✓	✗
Audit logs	✓	✗
