

SaaSConnect

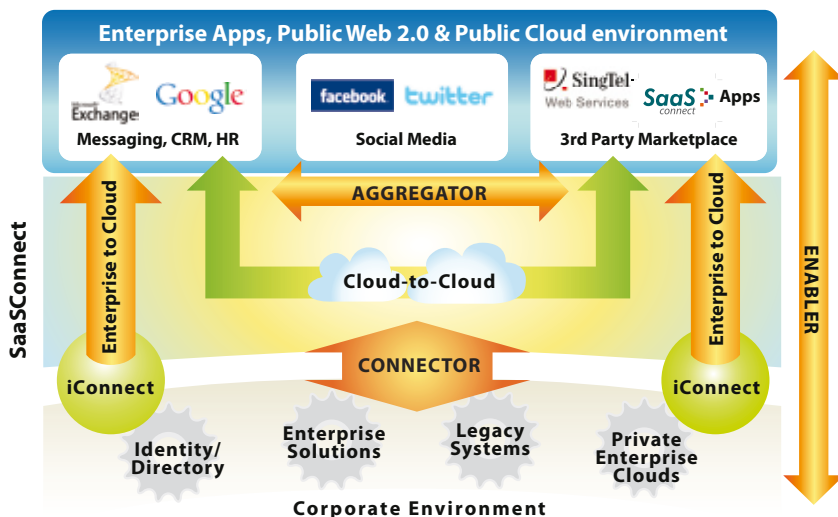

A Cloud Aggregator, Connector and Enabler

Today, Everything-as-a-Service (XaaS) from applications to mobility solutions, from infrastructure to networking platforms, can all be on Cloud. But the reality is Cloud Computing is not applicable in the same way for every organisation. CIOs need to plan and set their own Cloud vision and strategy to foster operational excellence and cost efficiencies. And the process of incorporating Cloud can be intense.

NCS SaaSConnect – Cloud Aggregator, Connector and Enabler

SaaSConnect simplifies the on-boarding and integration between cloud-based and on-premise applications. This is important for institutions that are on-boarding cloud technologies, and gradually moving their applications from on-premise to cloud. SaaSConnect centralises users and services administration, facilitates accounts provisioning and access management, thus removing the complexity and time required to manage and administer cloud services.

SOLUTIONS

- Consultancy: Cloud readiness assessment, strategy formulation
- Service Integration: Integrate internal and external cloud services
- Cloud Application Development: Develop and implement custom applications
- Cloud Enablement: Develop and implement cloud services

BENEFITS

- Ease of deployment and management: Accommodates changing work needs and manages user policies centrally
- Removing the complexity and time required to manage and administer cloud services
- Minimises the risk of password leakage
- Offers solutions for Campaign Manager and online meeting management (MeetingConnect)

FEATURES

Corporate Directory

With SaaSConnect Corporate Directory services, customers will be able to implement corporate password policies and manage users provisioning, as well as enable people finder features across the organisation.

All security requirements are handled internally within SaaSConnect and no clear text password will be saved on cloud system since the passwords are all stored in hash format, hence minimising the risk of password leakage.

Single Sign On

SaaSConnect will use Security Assertion Mark-up Language (SAML), an XML standard, which allows secure web domains to exchange user authentication and authorisation data. By using SAML, an online service provider can contact a separate online identity provider to authenticate users who are trying to access secure content, which in this case is the customer's LDAP server. The Single Sign On service will be used to cater for all cloud services.

SMS Password Reset

SaaSConnect incorporates SMS delivery for all password reset requests. An interface will be provided for password reset, such that users are able to make self request and reset is instantaneous so there is no downtime. Option to receive password reset information via alternative email is also available.

Apps Landing Page

Single point of access to internal or external applications or systems that organisation will require employees to access including email, document management system, and intranet. Based on the concept of App Store with a twist – users are not required to purchase or download software. Organisations will pre-subscribe access to the applications for employees and centrally manage what can be accessed by their staff based on the user, department or function profile.

SaaSConnect Apps

A suite of light-weight business applications that is easy and quick to deploy to support communication and collaboration. SaaSConnect Apps offer solutions for:

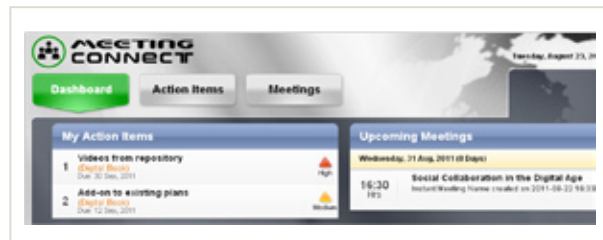

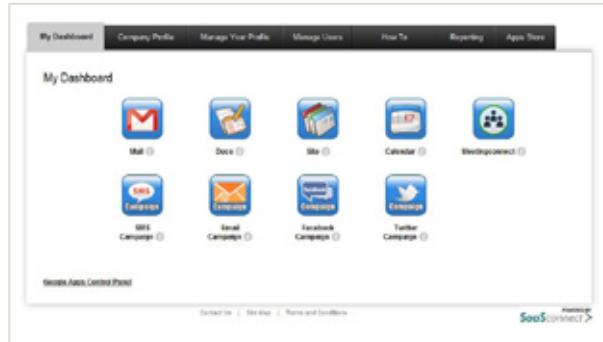

- **Campaign Manager** - Managing campaigns via SMS, Email and corporate Facebook and Twitter
- **MeetingConnect** - Paperless meetings via online tracking and administering meeting records, minutes and action items

Campaign Manager

Campaign Manager enables organisations to send mass broadcast of messages via multiple communication channels such as SMS, Email and update their corporate Facebook and Twitter accounts.

MeetingConnect

An online meeting management solution to track meeting decisions, actions and discussions. With consolidated meeting dashboard and automated reminders, users are tasked to update the progress status of their designated action items. Supporting meeting documents are stored and referenced to the meeting which can also be published and viewed on tablets through digital book software such as **NCS Engage**¹.

¹ NCS Engage enables users to view and collaborate with digital documents through annotations, discussions and posting to social collaboration platform.
