

Supply Chain Beyond ERP

Powered by NCS

The Real Time Value Network is a cloud-based network where informational lead times are virtually eliminated and physical lead times are minimised. It models and connects you to your own unique value chain, whether in whole - for example every node from retailers to raw material suppliers - or in part, for example your logistics and transportation network. The Real Time Value Network has the ability to manage the millions of daily transactions and data points that today's global value chains generate.

A single information "pipe" into the network provides integration across multiple companies' Enterprise Resource Planning (ERP) and execution systems. One Network Enterprises takes this multi-enterprise data and syncs and re-syncs demand, supply and capacities in near real time across all trading partners.

MAKING ERP MORE VALUABLE

ERP is not designed to manage events beyond the four walls of your enterprise. Today's supply chain implementations often revolve around filling ERP's gaps with multiple cloud based vendors that provide visibility. The result has been hundreds of cloud-based and traditional software systems stacked on top of each other - a coordination nightmare.

Even if the nearly impossible task of making all these systems work together can someday be accomplished, the ERP-based batch planning approach means that days and even weeks may pass before a consumer demand signal is both felt and, more importantly, acted upon by you and your trading partners. Not very demand driven, is it? This solution helps maximise your ERP investment with capability to capture the value beyond your four walls.

BETTER TOGETHER: NCS AND ONE NETWORK

Together, our solutions can help your business evolve from good to great.

- **Real time** - reacts to events and manages your supply chain in real time, and in near real time syncs inbound and outbound activities, demand to supply as often as every 15 minutes.
- **Optimises** - more than visibility, plans and executes demand, supply, and capacities concurrently within the same platform.
- **Coordinates and connects** - coordinates and orchestrates the internal enterprise systems and activities of your external trading partners - more than 40,000 companies are already connected to the Real Time Value Network.
- **Scalable** - some of the world's most complex supply chains rely on the Real Time Value Network. The network scales across businesses and technologies, allowing it to manage millions of daily transactions/data points.

BECOME DEMAND DRIVEN

Combined with the ability to rapidly and automatically respond to this newly visible information. The Real Time Value Network is a many-to-many network delivered in the cloud that coordinates, manages and responds to events in your supply chain in real time. Your enterprise can become demand driven with the Real Time Value Network.

THE REAL TIME VALUE NETWORK AT A GLANCE

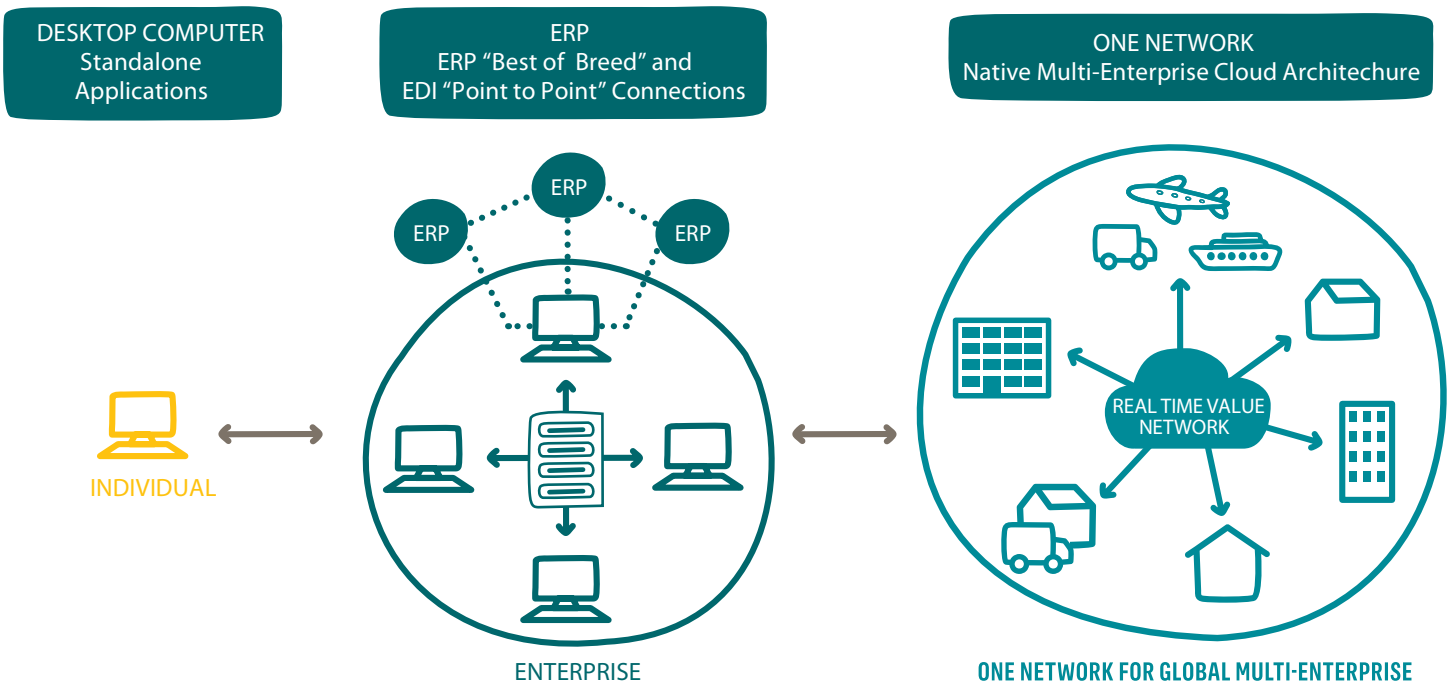

How demand-driven do you want to be? NCS technology partner, One Network Enterprises, has spent ten years building and implementing powerful network technology designed to increase profitability and throughput and help reduce volatility. With more than 40,000 diverse companies connected and growing rapidly, the Real Time Value Network is the only many-to-many cloud platform that optimizes the flow of goods from raw materials to consumers.
