Staying ahead of changes

Achieving and Accelerating Enterprise Agility

In today's complex and rapidly changing business environment, it is crucial for organisations to be able to respond swiftly and cost effectively to ensure survival. Successful organisations are able to sense and respond to challenges by turning them into opportunities and remain competitive in the market. Being agile and adaptive to global competition is key to success.

The methodology that used to work previously has now come under attack for being too rigid and inflexible. The traditional Waterfall model is a structured system approach where you follow a sequential flow to project completion. This method is highly risky, less efficient and more costly than Agile approaches as real projects seldom follow a sequential flow. In addition, at the early stages of most projects, there is often a great deal of uncertainty on the deliverables, thus it is very challenging to define a set of detailed criteria before project commencement.

How do you achieve and accelerate agility then? Through the Agile approach. The Agile approach provides opportunities for assessment of the direction of the project throughout the project lifecycle. This is achieved by having regular checkpoints to perfect the product or system. With an Agile approach, development and requirements are revisited and crosschecked numerous times during the project lifecycle. This approach enables an organization to develop the best product cost effectively and speed up the go-to-market.

Challenges

- Competitive business landscape where speed in execution is critical
- Software that fails to meet the real business needs
- Badly defined requirements
- Long wish list that requires lengthy delivery time
- Sloppy development practices
- Difficulty in monitoring the health status of projects
- Poor product quality

Solution

- Agile software development methodology that is supported by all technical best practices and lean software development principle to enhance the entire software development life cycle
- Close partnership with Agile ALM providers to propose the best-in-class hybrid tool suite to assist your Agile adoption

Benefits

- Faster go-to-market
- Align to organisation's business strategy
- Reduce risks with incremental software delivery and continuous customer feedback
- Flexibility to change priorities and requirements quickly
- Enhance clients and users relationships
- Visibility of the entire project management process
- Higher quality software that better fit user's requirements

Jumpstart your Agility Roadmap with NCS

NCS has a team of Agile professionals with years of experience in agility and hold certifications in CSM, CSPO, CSD, CSP, PSM and PMI-ACP. We provide the following services to help you transit from Waterfall to Agility approach:

Enabling Services

NCS Agile Energize provides the enabling services to assist you in your Agile transformation throughout the various stages:

Assessment

We perform assessments to identify and plan the Agile transformation roadmap and activities. This is through indepth interviews, measurement of conformance to Agile best practices, recording and sharing of findings and recommended next steps.

Enablement

We run workshops and pair with you on Agile projects to enable you to kick-start your Agile journey safely.

Transformation

With a pool of practitioners and coaches, we will hand-hold you throughout your transformation journey.

Transformation is a journey, not a single event. As a local System Integrator highly in touch with Asian business context, we are able to recommend suggestions that best fit the needs of your development team. Adoption of Agile practices can be incrementally adopted and improved upon progressively.

Training

We are able to provide a full range of Agile programs from Product Owner, Scrum Master and Team to equip you with best practices in your work domain.

Coaching & Monitoring

We will provide coaching to your Agile project team and monitor your Agile maturity progress.

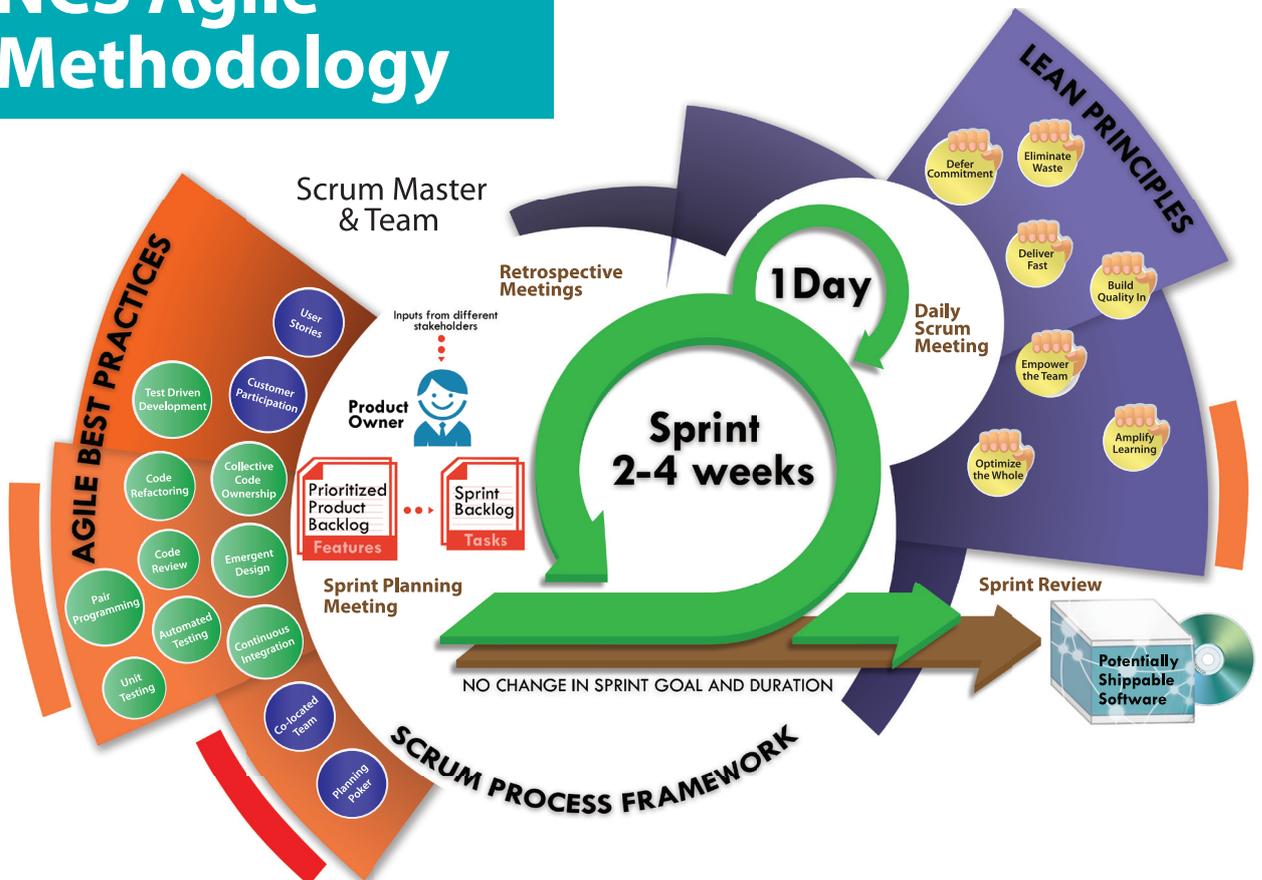

Agile Project Delivery

Using SCRUM Process Framework, supported by Agile Best Practices and Lean Principle, NCS Agile Energize provides Agile software development services to rapidly deliver customized software that meets your business goals.

User Experience Design (UXD)

NCS Agile Energize will ensure that your system's design is aligned with your business vision. This is achieved via active user engagement during frequent feedback loops throughout the project cycle. We will also provide consultation and guidance on design based on the technology feasibility roadmap.
