

Delivering Demand-Driven Supply Chain

Powered by NCS

NCS and One Network Enterprises are working together to provide cloud-based solutions for collaborative planning and execution across global trading networks and supply chains.

A demand-driven supply chain involves transforming the traditional supply chain into a highly integrated multi-tier supply network to help: remove information latency, reduce operating costs, and improve profitability and customer service. NCS, combined with One Network's software platform, help to automate and accelerate demand-driven supply chain initiatives and enable companies to better align their planning, procurement and replenishment processes to actual consumption and demand changes in one Real Time Value Network™, powered by One Network.

The pace of change in today's global economy has placed a sense of urgency on organisations to adopt new technologies to drive faster growth and better proficiency. NCS and One Network bring together a breadth of supply chain knowledge and latest technology and services experience.

BETTER TOGETHER: NCS AND ONE NETWORK

Together we already serve some of the world's largest retailers, logistics providers, consumer packaged goods (CPG) companies, and manufacturers with over **40,000 trading partners already connected** to the Real Time Value Network.

Together our solution covers the **end-to-end supply chain - including demand, supply, logistics and business continuity**.

Together this partnership has been designed to integrate and even embrace existing IT systems, such as Enterprise Resource Planning, to help maximise existing investments as well as help minimise business disruption.

Together we offer pre-packaged industry templates for retail, logistics, CPG, and heavy industry customers that help you get up and running quicker.

Together we pioneer the move from supply chains to trading networks that synchronise both the flow and movement of materials and information, by linking organisations together to serve the end-customer.

BENEFITS THAT CAN BE OBTAINED WITH ONE NETWORK

- Greater supply chain visibility
- Multi-enterprise collaboration
- Reduced lead times
- Better on-time performance/ increased SLA
- Faster time to market
- Additional market opportunities
- Performance clarity
- Sustainability footprint
- Better forecast and demand signal reaction

REAL TIME VALUE NETWORK™ POWERED BY ONE NETWORK ENTERPRISES

COMMAND AND CONTROL MONITORING

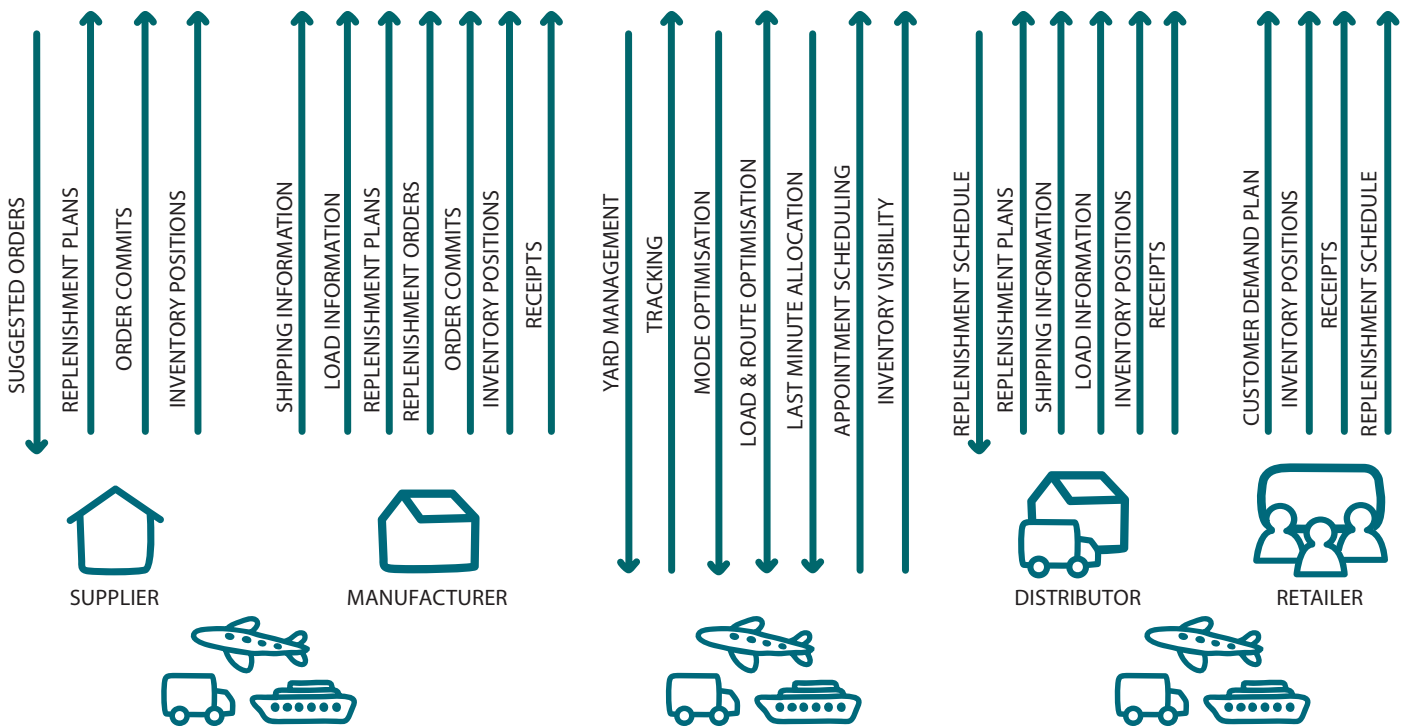

Demand, Revenue, Material, Operating, Capacity, Transportation and Financial Metrics
